RESEARCH EXPERIENCE

- **Reinforcement Learning for Real-time Bidding** **Tencent Social Ads, Beijing, China**
  Advisor: Liubin (Ubi) Wang and Haishan Liu *Nov. 2018 – Jun. 2019 (Expected)*
  - Changed traditional A3C structure and proposed multi-objective reinforcement learning algorithm (in short, MoTiAC): using multiple critics to guide one actor towards a balance situation between different objectives
  - Improved daily revenue by 4.3% and ROI by 2.6% for Tencent Ads platform in large-scale off-line experiments

- **Graph Convolution for Answer Selection in Community QA** **UIUC, IL, USA**
  Advisor: Hari Sundaram; **Co-worker:** Kanika Narang and Adit Krishnan *Jul. 2018 – Nov. 2018*
  - Proposed induced-relation (contrastive, similarity and reflexive) graph convolutional networks
  - Conducted extensive experiments on 5 tech and 5 non-tech Stackexchanges as well as 3 SubReddits
  - Improved Accuracy & MRR by 4.5% & 2% (16% & 7%) for Stackexchanges (SubReddits) respectively

- **Popularity Predicting for Official Account Articles in WeChat**   Tencent, Shenzhen (remote), China
  Advisor: Peng He and Xiaofeng Gao   *Jan. 2018 – Jun. 2018*
    - Found three powerful inductive factors for cascade diffusion: *Influence, Attractiveness and Potentiality*
    - Inserted a hidden layer into traditional Bayesian network structure, and used EM algorithm to train
    - Reached a great performance at 92.96% in top-50 coverage of WeChat popular articles

- **Information Dissemination in Social Networks**   SJTU, Shanghai, China
  Advisor: Xiaofeng Gao and Guihai Chen   *Apr. 2017 – Jan. 2018*
    - Crawled data from Twitter, Weibo with API and filtered datasets for future use of laboratory research
    - Employed survival theory, combining static and dynamic perspective for cascade dissemination
    - Inspired by GAN, unified feature driven model and point process model in adversarial training
    - Found that model-free PP is better in short-period prediction and model-based PP is better in long-period prediction
